SAFEGAINS

PPT V1.4

SAFEGAINS

In today's extreme volatility, one strategy have been proven to be highly effective – HODL.

- HODL is a term derived from a misspelling of "hold" that refers to buy-and-hold strategies in the context of bitcoin and other cryptocurrencies.

- It also means "Hold-on-dear-life"

- Hodlers wash their hands of all this volatility and prognostication. They simply hodl, which helps them to counteract two common destructive tendencies: FOMO (fear of missing out), which can lead to buying high, and FUD (fear, uncertainty, and doubt), which can lead to selling low.

Synopsis
After the dramatic crash, which saw the cryptocurrency tumble to nearly $30,000, the currency has moved in a range of $9,000 in the past few days suggesting that the market is still finding its feet after being dazed by the sell-off.

Currently, around 26 per cent of the Bitcoin supply held by short-term traders (less than 155 days) is underwater after the crash, according to data available on Glassnode.

MUMBAI: The raging debate among cryptocurrency investors after the shock and awe crash of the previous two weeks is whether this is the beginning of sustained bear market in Bitcoin or mere clearing of the froth created by leverage-based trading.

After hitting an all-time high of $64,863.10 on April 14, Bitcoin has now given up 50 per cent of its gains with virtually every buyer of the cryptocurrency since February in losses. After the dramatic crash, which saw the cryptocurrency tumble to nearly $30,000, the currency has moved in a range of $9,000 in the past few days suggesting that the market is still finding its feet after being dazed by the sell-off.

The selloff in late May in Bitcoin and other cryptocurrencies was largely driven by regulatory actions taken by China against cryptocurrency dealings and miners, which snowballed into liquidation of leverage-based positions in the market taken by short-term holders of the coin.

According to Bybt.com, as many as 887,000 trading accounts were liquidated on May 20 alone reflecting the sheer magnitude of losses for investors. Currently, around 26 per cent of the Bitcoin supply held by short-term traders (less than 155 days) is underwater after the crash, according to data available on Glassnode.

Interestingly, long-term holders of Bitcoin, defined as those who have held their coin for a period of more than 155 days, have not panicked in the crash of the past two weeks.

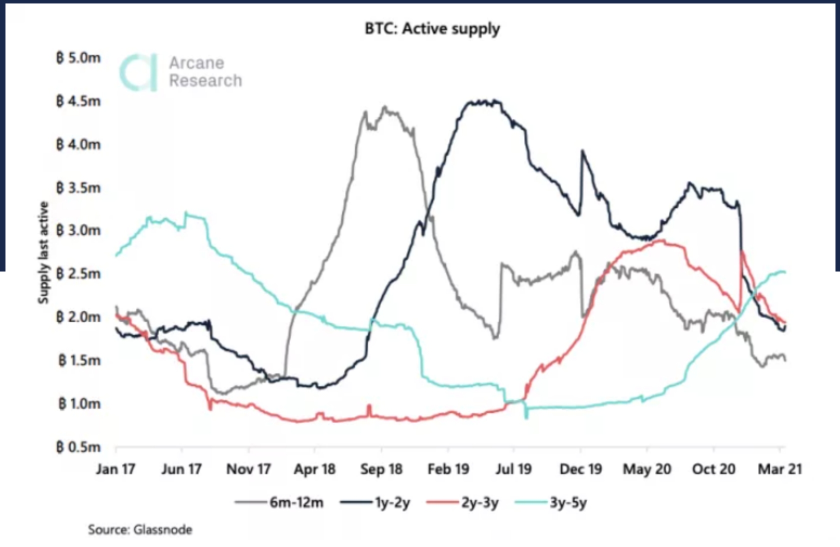
Long-Term Bitcoin HODLers Still Accumulating, Suggests Conviction

The active supply of bitcoin held for shorter periods of time keeps shrinking, according to Arcane Research.



Current Problems in the market

Hodlers are earning 0% interest on their assets

- Some of them hodl their assets in their cold wallet while some hodl in them in exchanges, earning 0% interest!

Exchanges takes all the profits

- What do exchanges do with your assets?

- Are you getting any interest in return?

Shitcoin Hodlers

- There are fail/scam projects everywhere, and some unlucky people who invested will become bag holders.

- There are fail/scam projects everywhere, and some unlucky people who invested will become bag holders.

What if there is something out there that can let you earn interest on your idle assets on a protocol that is **SAFE**

AND

Let you **GAIN** value from your shitcoins?

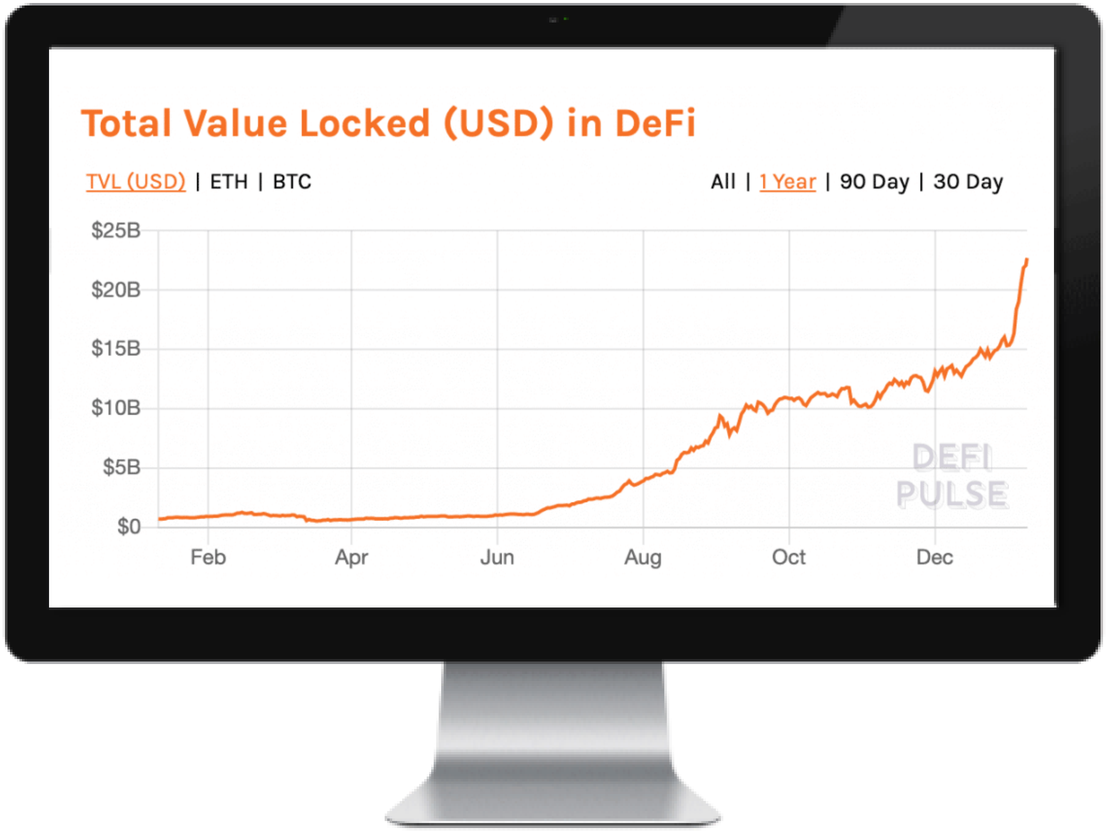
INTRODUCING SAFEGAINS DEFI Protocols

SAFEGAINS

What is Decentralized Finance (DeFi)?

- Defi are financial applications built on blockchain technologies, typically using smart contracts.
- These applications and peer-to-peer protocols developed on decentralized blockchain networks that require no access rights for easy lending, borrowing, or trading of financial tools.

The DeFi Boom



- The amount of money invested in DeFi or what we call it, Total Value Locked (TVL) climbed to over **$20 billion** in January 2021, up from $690 million from January 2020, a **20X** increase in 1 year!

- The amount of money invested in DeFi or what we call it, Total Value Locked (TVL) climbed to over $20 billion in January 2021, up from $690 million from January 2020, a 20X increase in 1 year!

Types of DeFi applications

Borrowing and Lending Protocols

Decentralized Exchanges (DEX)

Payment Protocols

Prediction Market Protocols

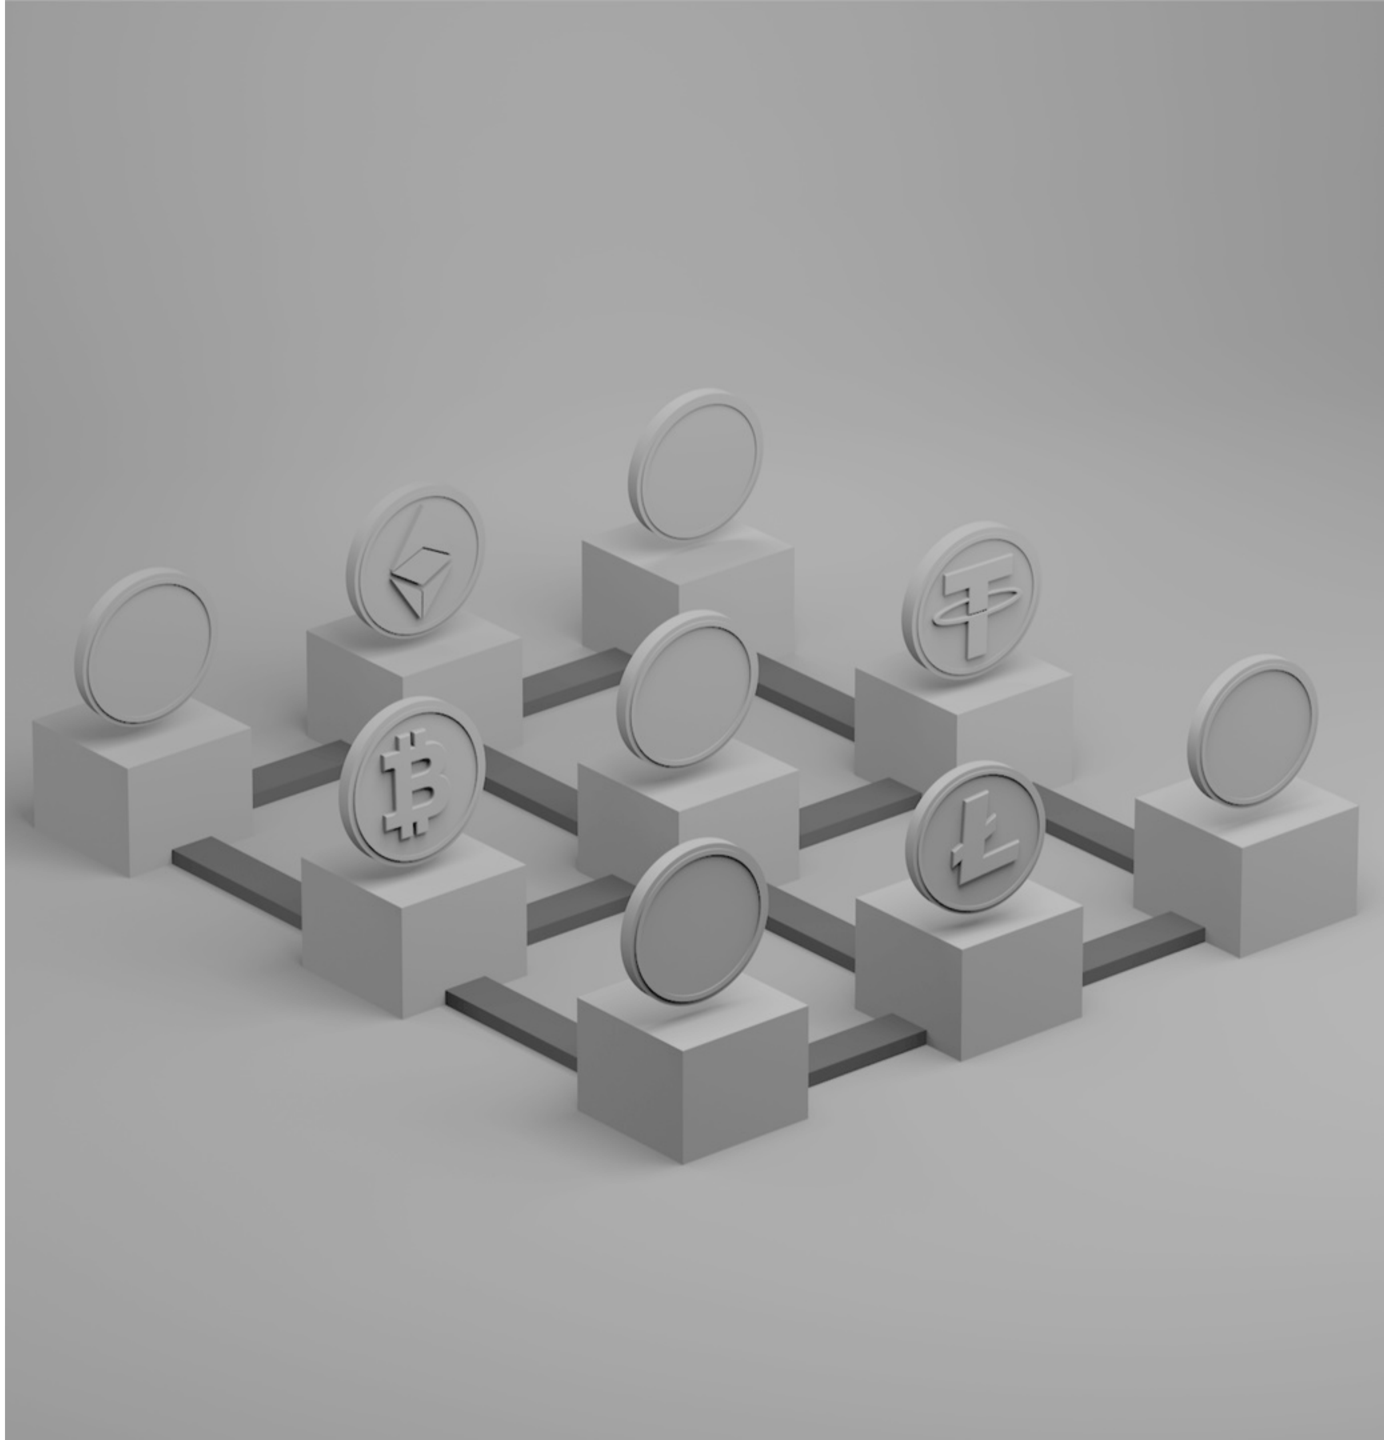
Stablecoins

Why is DeFi so popular?

- DeFi has been facilitating financial freedom around the world.

  It offers tools for investors **to protect their wealth** from tough capital controls. Besides, DeFi makes the remittance process **faster, simpler and more cost-effective.**

- **Attractive returns!**



SAFEGAINS protocol

- SAFEGAINS protocols is a set of DEFI protocols designed to maximise hodlers returns while ensuring 100% safety and security of users' assets.

- Through its innovative protocols, SAFEGAINS pools digital assets together with a mission to merge all alt coin communities to build the SAFEGAIN community and TVL to a critical mass, bringing value to its stakeholder.

PHASE 1 – SAFEGAINS HODLERS POOL

Protocol

Phase 1	Phase 2	Phase 3
Hodlers Pool	Community Aggregator Yield Farming	Lending & Borrowing

Objective

Phase 1

- Community Building
- TVL Generation
- Reward Hodlers

Phase 2

- Secondary revenue for hodlers
- Launch of Safegains Token

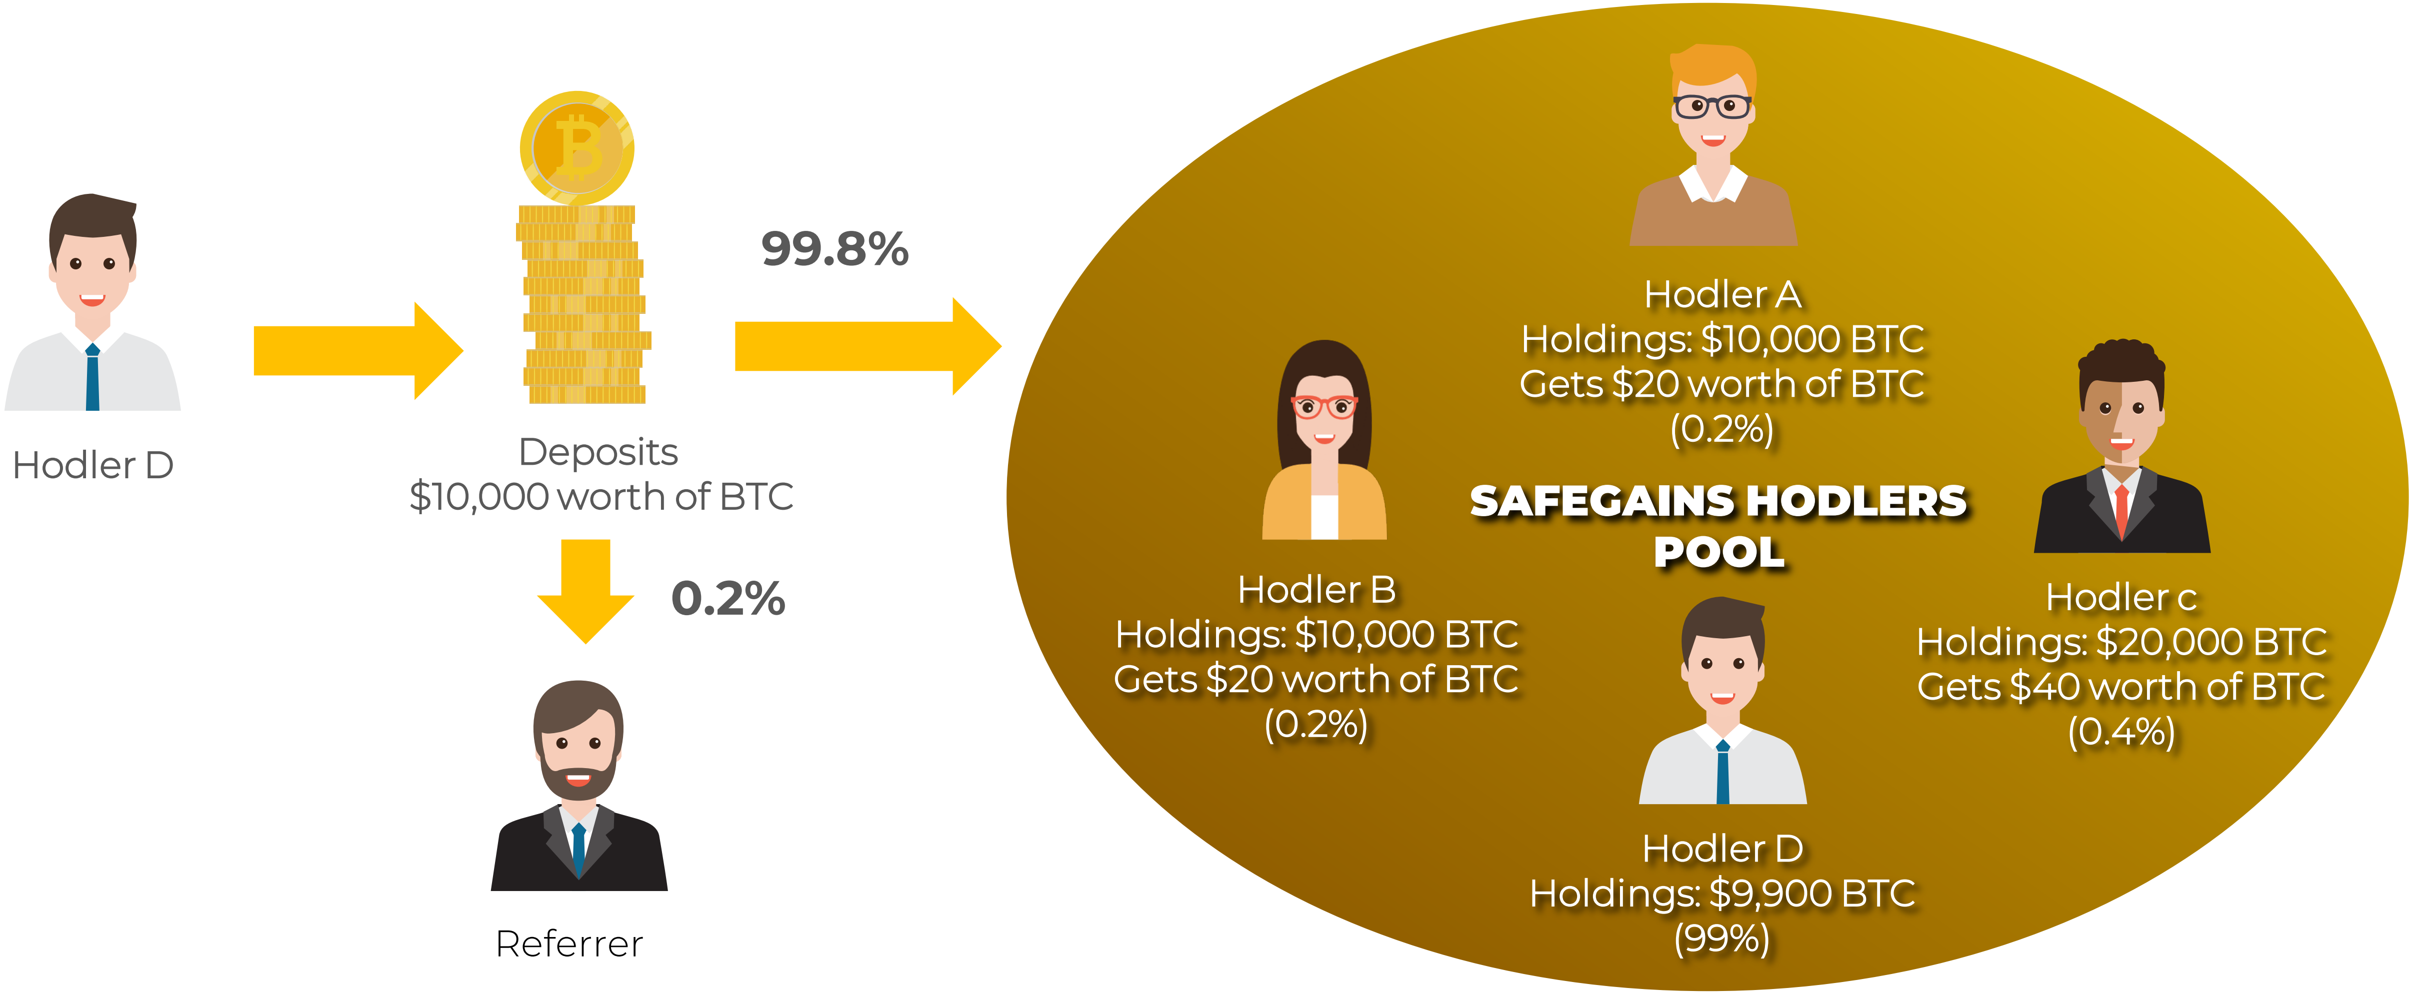
Phase 3

- Tertiary revenue for hodlers

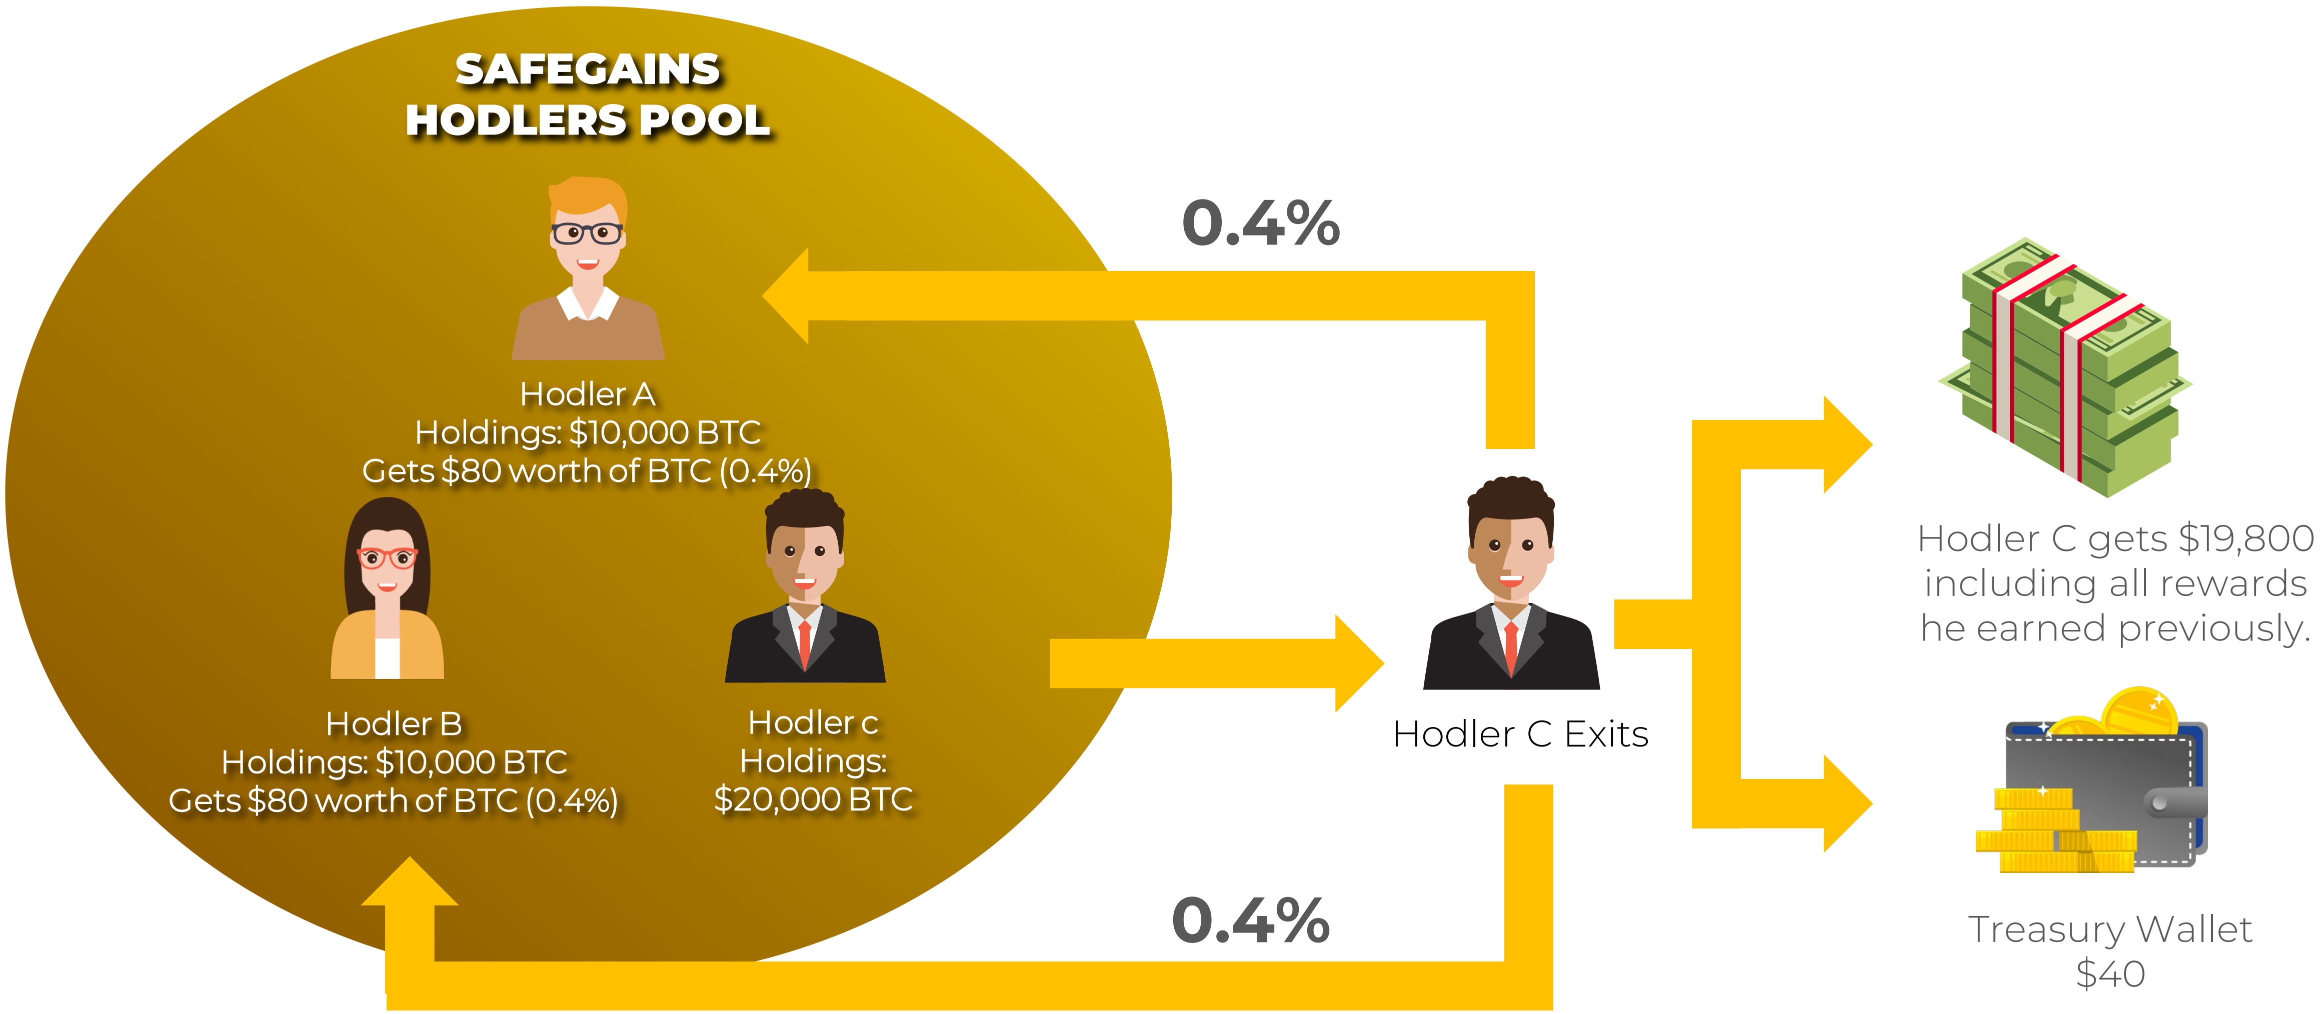
PHASE 1 –
SAFEGAINS HODLERS POOL

- SAFEGAINS Hodlers Pool is an audited DeFi protocol written on a Smart Contract designed to reward hodlers.
- When a Hodler deposits his assets, 1% will be taxed where 0.8% will be distributed to all the hodlers in the pool according to their stake, and 0.2% will be rewarded to the referrer.
- When a Hodler withdraws his assets, 1% will be taxed where 0.8% will be distributed to all the hodlers in the pool according to their stake again, and 0.2% will go to the treasury wallet.

How it works –
Holder A deposits to the pool



How it works –
Holder C exits the pool



45 Days Reward Halving

- All hodlers rewards will be reduced by 50% after 45days after their last deposit. This is to incentivize liquidity in the hodlers pool.
- There are 2 ways to regain full rewards again.

  1. Withdraw your funds and deposit them again.
  2. Deposit a higher amount than your initial deposit.

You

You deposit some 1000 USDT on Day 1 and you are getting an average of 10 USDT each day as rewards.

On Day 46, you will get 5 USDT as the 45 Days Reward Halving have commenced.

To regain full rewards, you can either withdraw your USDT and deposit them again or deposit 1001 USDT.

SAFEGAINS HODLERS POOL BENEFITS

Passive Income

Earn from your idle assets like never before!

Highly Secured

All funds are held in an audited smart contract, with no risk of being hacked!

ALL HODLERS WINS!

The maximum “loss” is 2%, IF you are the first person who deposit and the first person who withdraw from the pool.

As long as you hodl, you earn interest from everyone else!!

SAFEGAINS HODLERS POOL BENEFITS

PASSIVE INCOME
Earn from your idle assets like never before!

HIGHLY SECURED
All funds are held in an audited smart contract, with no risk of being hacked!
Audit is conducted by Renown Blockchain Audit firm, Paladin.

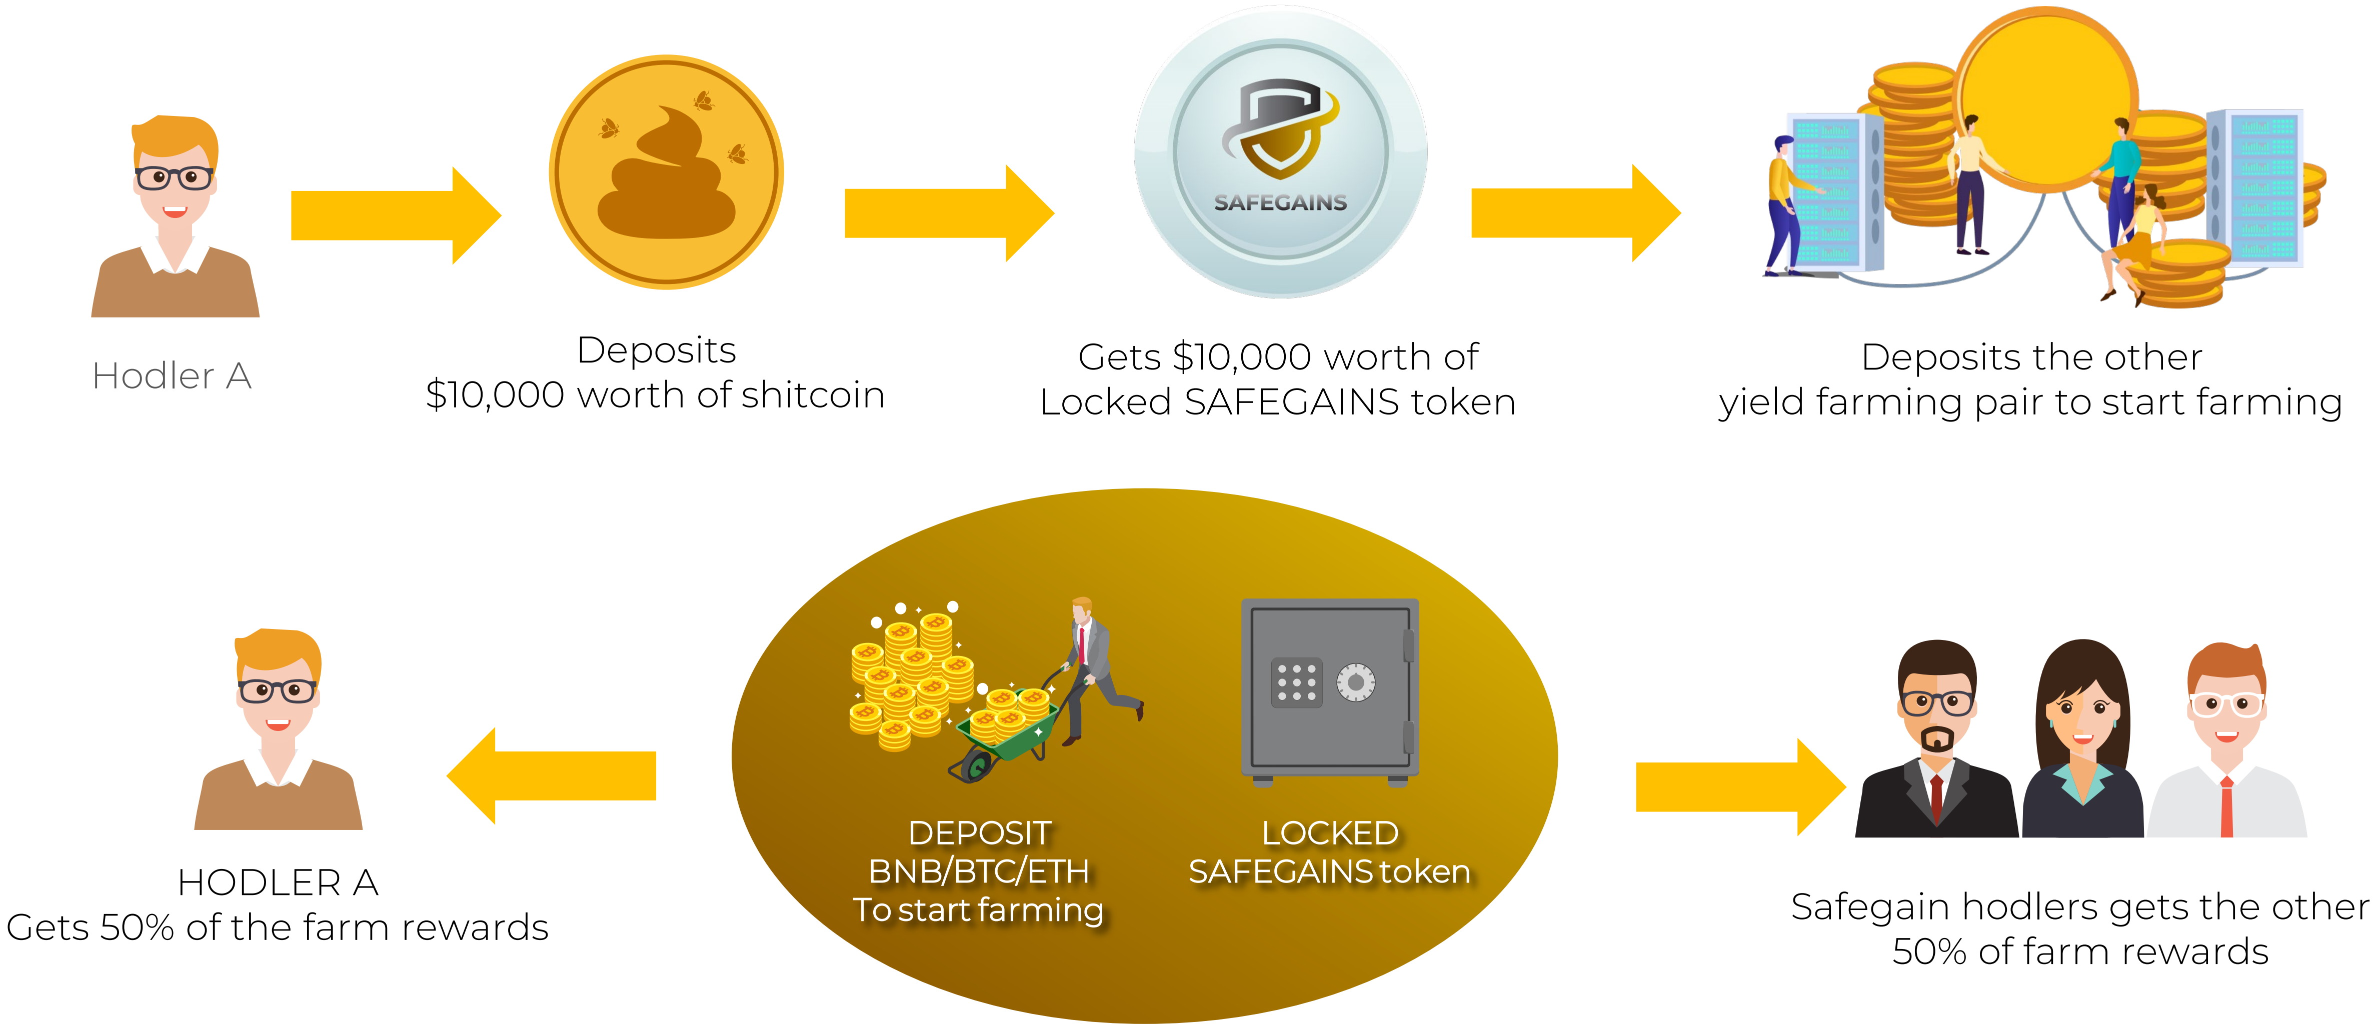
100% NO RUG-PULL!
Ownership of the smart contract is renounced. Nobody will be able to change the perimeters of the smart contract anymore as the private keys belongs to no one now, 100% rug-free!

ALL HODLERS WINS!
The maximum “loss” is 2%, IF you are the first person who deposit and the first person who withdraw from the pool. As long as you hodl, you earn interest from everyone else!!

PHASE 2 –
Community Aggregator Yield Farming

- Our Yield Farms allow users to earn SAFEGAINS tokens while supporting our protocol by staking LP Tokens.
- Our innovate and unique community protocol allows shit coins holders to swap their tokens for locked SAFEGAINS tokens to participate in our yield farms, creating huge value in return.
- Only shitcoins that achieved certain requirements such as being listed on CMC are allowed to be swapped, and its value will be determined by certain metrics and calculations.

How it works



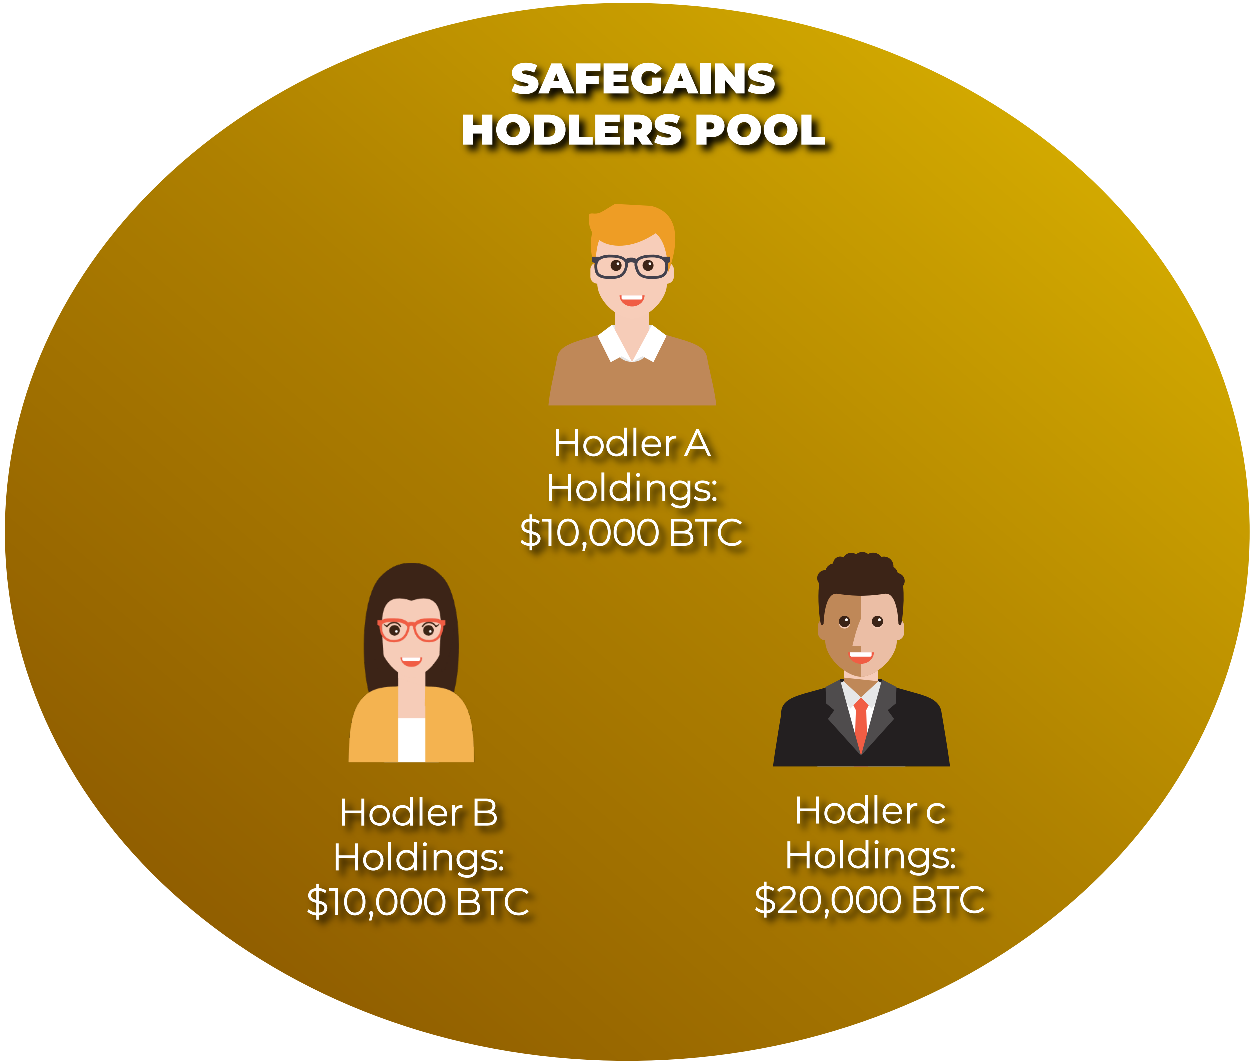
Hodler A
Deposits
$10,000 worth of shitcoin
SAFEGAINS
Gets $10,000 worth of
Locked SAFEGAINS token
Deposits the other
yield farming pair to start farming
DEPOSIT
BNB/BTC/ETH
To start farming
LOCKED
SAFEGAINS token
HODLER A
Gets 50% of the farm rewards
Safegain hodlers gets the other
50% of farm rewards

PHASE 3 –
Lending & Borrowing

- Leveraging on the existing TVL on SAFEGAINS Hodlers Pool, hodlers will now be able to lend out their assets for additional interests!

- It helps lenders earn safe and stable yields and offers borrowers undercollateralized loans for leveraged yield farming positions, vastly multiplying their farming principals and resulting profits.

HOW IT WORKS



- Hodler A, who have $10,000 worth of BTC in the hodlers pool, can borrow up to a maximum of 50% of his collateral.
- Depending on the utilization of the pool, the interest rate varies.
- Once funds are borrow, interests is paid to the other hodlers in the pool.
